

# Resightings of a Colour Ringed Gull

Thank you for your report of a gull ringed with a colouring. This a method for bird marking where each bird get an unique code which enable us to follow each individual. Under you will find the the movements we have registered for this bird.

This is a list generated from the webpage [www.ringmerking.no/cr](http://www.ringmerking.no/cr). If you want you can follow your bird(s) here in the future, to see where they will be reported. It is also possible to see pictures of this bird, the birds size (biometrical measurements) and maps of the birds movements. It is also possible to report more sightings of this and other birds ringed with colourings from our projects at this webpage. Of course, if it easiest for you with email we can be reached at [post@ringmerking.no](mailto:post@ringmerking.no).

Birds are ringed so we can learn where they fly, how old they get and how many they are. When we can follow individuals this way we can learn if they have the same breeding and overwintering area year after year, and also when and where they migrate. We are also interested in if they have the same breeding partner each year, and how many chicks they get, so you are most welcome to enter such details if you have. Each year it is ringed 4000-8000 gulls in Norway, and the data from this project are used in different monitoring schemes. We thank you very much for your contribution, that is highly appreciated.
